A one-stop quick reference for writing modern HTML.

1. Document Structure

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Page Title</title>
</head>
<body>
  <!-- Visible content goes here -->
</body>
</html>
```

2. Text & Headings

```
<h1>Main heading</h1> ... <h6>Smallest heading</h6>
<p>Paragraph</p>   <br> line break   <hr> horizontal rule
<strong>important</strong> <em>emphasis</em> <b>bold</b> <i>italic</i>
<u>underline</u> <mark>highlight</mark> <small>fine print</small>
<del>removed</del> <ins>added</ins> <sub>sub</sub> <sup>sup</sup>
<code>inline code</code> <pre>preformatted</pre> <blockquote>quote</blockquote>
<abbr title="HyperText Markup Language">HTML</abbr>

Use `<strong>/<em>` for meaning, `<b>/<i>` for pure styling — screen readers treat them differently.
